

Clock in Scala

[Readme \(readme\)](#)[Test Suite \(../clock\)](#)

Clock

Implement a clock that handles times without dates.

Create a clock that is independent of date.

You should be able to add and subtract minutes to it.

Two clocks that represent the same time should be equal to each other.

The Scala exercises assume an SBT project scheme. The exercise solution source should be placed within the exercise directory/src/main/scala. The exercise unit tests can be found within the exercise directory/src/test/scala.

To run the tests simply run the command `sbt test` in the exercise directory.

For more detailed info about the Scala track see the help page (<http://help.exercism.io/getting-started-with-scala.html>).
