Anagram in Scala

| Readme (readme) | Test Suite (../anagram) |

Anagram

Write a program that, given a word and a list of possible anagrams, selects the correct sublist.

Given `"listen"` and a list of candidates like `"enlists"` `"google"` `"inlets"` `"banana"` the program should return a list containing `"inlets"`.

The Scala exercises assume an SBT project scheme. The exercise solution source should be placed within the exercise directory/src/main/scala. The exercise unit tests can be found within the exercise directory/src/test/scala.

To run the tests simply run the command `sbt test` in the exercise directory.

For more detailed info about the Scala track see the help page (http://help.exercism.io/getting-started-with-scala.html).
