Meetup in Scala

Readme (readme)	Test Suite (../meetup)

Meetup

Calculate the date of meetups.

Typically meetups happen on the same day of the week.

Examples are

- the first Monday
- the third Tuesday
- the Wednesteenth
- the last Thursday

Note that "Monteenth", "Tuesteenth", etc are all made up words. There was a meetup whose members realised that there are exactly 7 days that end in '-teenth'. Therefore, one is guaranteed that each day of the week (Monday, Tuesday, ...) will have exactly one date that is named with '-teenth' in every month.

The Scala exercises assume an SBT project scheme. The exercise solution source should be placed within the exercise directory/src/main/scala. The exercise unit tests can be found within the exercise directory/src/test/scala.

To run the tests simply run the command `sbt test` in the exercise directory.

For more detailed info about the Scala track see the help page (http://help.exercism.io/getting-started-with-scala.html).
